

Advanced *Hybrid* Steam Room

You are looking at the Advanced Hybrid Steam Room manufactured by Am-Finn. This facility has invested in the industry's most advanced steam room available, energy-efficient and self cleaning (green cleaning). Better for you and the environment.

This steam room is made of a combination of advanced anti-bacterial composites and features the proprietary PowerZONE 400 generator, a high-tech O3 sterilizer system, making it the most hygienic commercial steam room available. The water line is filtered with the Steam SHIELD 8000 filter system ensuring clean and healthy steam generation.

The innovative material construction and efficient design make this steam room 50 % more energy efficient than traditional tile rooms and naturally resistant to mold, mildew, fungus and many other types of human pathogens.

Please recognize, by choosing the Advanced Hybrid Steam Room System, your facility is offering you the most sanitary commercial steam room system in the world - and doing their part as an environmentally responsible organization.

ENERGY EFFICIENT • GREEN CLEANING • SANITARY

Things you need to know:

- Jewelry of any type is not allowed in the steam room. Steam could damage jewelry and can cause minor burning.
- Use caution when entering the room. The ceiling and door height are low by design. The low ceiling contributes greatly to the room's efficiency. The curved ceiling promotes efficient water run-off contributing to the sanitary features of the room.
- Individual seat design discourages bathers from lying down in the room for courtesy and safety reasons.
- Pregnant women, those with known heart conditions, those taking medication and elderly persons should consult their doctor before entering the steam room. High temperatures of the steam room could increase the risks to your health.
